

INVENTION DISCLOSURE FORM FOR PATENTS

Applicant Name-Marwadi University

1. Particulars of Inventors

Mr./Ms/Dr.	Name (Full)	Department	Designation	Mobile No.	Email	Postal Address
Mr.	Adityasinh Jadeja	C.E.	Student	8866352354	aadiyasinh.jadeja118636@marwadiuniversity.ac.in	Rajkot
Mr.	Tirth Kothiya	C.E.	Student	9313057148	tirth.kothiya123512@marwadiuniversity.ac.in	Rajkot
Mr.	Priyansh Pandit	C.E.	Student	8780238759	priyansh.pandit123501@marwadiuniversity.ac.in	Rajkot

2. Provide title of the invention: Recipe food webapp

3. In 100 words or less, please provide an abstract or summary of the invention:

The invention relates to a smart recipe search engine designed to personalize and simplify the process of finding cooking recipes. It enables users to search for recipes based on available ingredients, dietary preferences, cooking skills, kitchen equipment, and time constraints. The system features visual ingredient recognition by displaying images alongside names, enhancing usability for beginners or unfamiliar users. It further incorporates intelligent analysis of recipe content to recommend truly easy-to-follow recipes tailored to individual user profiles. This innovation aims to make cooking more accessible, efficient, and enjoyable through personalized and intuitive recipe suggestions.

Contact Details: Aayush Gupta, Email:mu@ennobleip.com, Phn- +91 92891 50390

4. Detail description of the invention:(Answer to all below are required in detail)

a. Problem the invention is solving:

Users struggle to find, manage, and interact with recipes on existing platforms due to poor organization and limited features. This system solves that by providing a user-friendly platform with recipe browsing, ratings, comments, and media content all in one place.

b. Advantages of the invention disclosing about the increased efficiency/efficacy

The system improves efficiency by streamlining recipe discovery, user interaction, and content management. Users can quickly find relevant recipes, watch tutorials, leave feedback, and manage their accounts—all from one integrated platform. This enhances user experience, encourages engagement, and simplifies content updates for administrators.

c. Best way of using the invention as well as possible variants

The best use of the system is as a web where users can register, browse categorized recipes, view videos, and interact through ratings and comments.

d. Working of invention along with Drawing, schematics and flow diagrams if required with complete explanations

The system works through a client-server model. Users interact via a web interface built with HTML, CSS, and JavaScript. User requests (e.g., login, recipe search) are processed by PHP scripts, which interact with a MySQL database to retrieve or store information. The backend handles user authentication, recipe management, comments, and ratings.

5. Have you conducted Primary Patent Search? Yes / No (if yes, attach the patent search results)

NO

6. Existing state-of-the-art and prior arts: (Brief background of the existing knowledge/product/process in the market)

- Existing recipe platforms like AllRecipes, Yummly, and Food Network provide users with access to large recipe databases. These platforms allow browsing, filtering, and basic interaction through reviews or ratings. However, they often lack real-time interaction, integration of multimedia tutorials, personalized content delivery, or user-generated recipe management features.
- Many current systems are also limited in terms of administrative control, content scalability, and community-driven content enrichment. The proposed invention builds upon these ideas by offering a more unified, interactive, and scalable platform.

•

7. List the Technical features and Elements of the invention along with the Description of your invention from start to end.

Technical Features:

- Frontend Interface: HTML, CSS, JavaScript-based UI for user interaction.
- Backend Processing: PHP scripts for handling logic and data requests.
- Database: MySQL database storing user profiles, recipes, comments, ratings, and media.
- Authentication System: Secure login and registration mechanism.
- Recipe Management Module: Create, read, update, and delete (CRUD) operations for recipes.
- Rating & Commenting System: Enables feedback and interaction on recipe content.
- Admin Panel: Privileged access to manage users, recipes, and content.
- Media Integration: Embedding of images and cooking videos for recipes.

Description of the Invention (Start to End):

- User Registration/Login: Users create accounts and securely log in.
- Recipe Browsing: Users browse recipes categorized by type or ingredients.
- Recipe View: Selected recipes display ingredients, steps, images, and videos.
- Interaction: Users rate and comment on recipes to provide feedback.
- Content Management: Admins manage recipes, videos, user activity, and system content.
- Data Storage & Retrieval: All actions are stored in and served from a structured MySQL database.
- Responsive Interface: Accessible on desktop and mobile devices.

8. List out the features of your invention which are believed to be new and distinguish them over the closest technology.

- Combines recipes, ratings, comments, and video tutorials in one platform.
- Includes a backend admin panel for full content and user management.
- Supports full recipe lifecycle: create, view, update, and delete.
- Uses a structured database for efficient data handling.

9. Has the invention been built or tested or implemented? If yes please provide the Efficiency/Efficacy details of the invention

Yes, the invention has been implemented as a functional web application. The model includes user registration, recipe browsing, commenting, rating, and an admin panel. It runs efficiently with smooth navigation, accurate data processing, and real-time user interaction.

10. Briefly state when and how you first conceived this idea?

The idea for The Food recipe webapp originated from a personal need to simplify the goal of building a more interactive, user-driven platform that combines recipes, videos, ratings, and admin management in one integrated system.

11. Have you sold, offered for sale, publicly used or published anything related to this invention? If yes, please briefly explain the dates and circumstances. List those individuals to whom you have revealed your invention. Were non-disclosure documents signed prior to disclosure in each case? Please state any deadlines of which you may be aware for filing an application on this invention.

Not yet publicly sold or published. Limited sharing with peers for testing.

12. Include any reasons that your invention would not have been obvious to someone of average skill in the art.

The invention integrates multiple features—recipe management, video tutorials, user feedback, and backend moderation—into a single cohesive platform. While each feature may exist individually, combining them with a structured database, admin controls, and scalable design is not an obvious step for someone skilled in standard web development. The system's structure and functionality demonstrate a unique approach that enhances user engagement and platform efficiency in ways not typically addressed by existing solutions.

13. Additional comments by inventor (if you want to give more details out of scope of this IDF).

Future enhancements could include user profile customization, Add user own recipe & also user put their own recipe videos

14. Drawings/Flowchart/Table

1. User Flow:

- Start → User Registration/Login
- → Homepage with Recipe Listings
- → Select and View Recipe (details, images, videos)
- → Rate and Comment on Recipe

2. Admin Flow:

- Admin logs into Admin Panel
- → Manage Users and Recipes (CRUD operations)
- → Changes reflected in Database

3. Database:

- Stores:
 - User accounts
 - Recipe data
 - Feedback (comments/ratings)
